Abstract

The lexical tags, called Tagsets, play a significant role providing the large amount of information about a word and its neighbors, telling us something about how the words are pronounced, being used in stemming for information retrieval[1]. So, a standard tagset is necessary for working with a language in any computational linguistic field. Two major kinds of tagsets for a language are fine-grained tagset, which uses a large number of tags, and coarse-grained tagset, which uses a small number of tags. The goal of this paper is to propose a fine-grained tagset, containing a total of 1070 tags, for tagging Bengali texts. Being a completely inflectional language, Bengali requires more tags for tagging a text than English or some other non-inflectional languages. A good example of this is the proper noun 'য়সান' (masculine gender)[TABLE 1], which takes 39 forms in Bengali.

Key Words: Bengali Tagset, Inflectional Language, Fine-Grained Tagset, Coarse-Grained Tagset.

1. Introduction

Parts-of-Speech (POS) tagging – the task of assigning appropriate POS tag to every word in a given text – is an important process used as a building block for several Natural Language Processing (NLP) tasks. A POS tagsetusually defines the list of morpho-syntactic categories that are applicable at the word-level to a specific language, though in some cases they may also include pure morphological or syntactic information [2]. Computer scientists and linguistics are working overnight for finding morphological or syntactic information from each word.

To understand human speech or to extract information or to classify data, firstly, a system has to understand what is the function of each word used in the speech or in the document. Based on the function of each word, we annotate them by some tags called Parts-of-Speech. So, identifying the appropriate tag for each word used in the text or speech plays a significant role in language processing.

Between the two types of tagsets, fine-grained tagset is the most appropriate way for finding the nuances of the words. For instance, consider the two examples: আমিকাজটিকরি।আমিকাজটিকরই। In the above two examples, the verbs 'করি' and 'করাই' are expressing completely different meanings. In the first sentence, the subject is doing the task, but in the second sentence, the subject is making someone else do the work. But both of these words have come from the same root 'কর'. This root word 'কর' has 160 tags according to our tagset and each tag is containing significant amount of linguistics information. But the verb 'do' only has 5 forms (like do, did, done, does, doing) in English. If we would use a small number of tags (coarse-grained tagset), we would have to compromise finding the nuances of the words. So, for working with Bengali, a fine-grained tagset is a must as it is a completely inflectional language.

Significant amount of improvement is shown in some languages like English, German, French, etc., we are yet to see any significant advancement in Bengali. However, Bengali is the fifth mostly spoken language in the world. So, research on the Bengali word classes is the demand of the time. Starting working on Bengali language processing is very hard, as there is no useful data source available for Bengali research. Coping up with all types of difficulties, we have proposed a fine-grained Parts-of-Speech Tagset for Bengalilanguage.

Traditional Bengali grammars generally provide five basic Parts-of-Speech [like – বিশেষ্য (Noun), বিশেষণ (Adjective), সর্বনাম (Pronoun), অব্যয় (Combination of Conjunction, Preposition, Indeclineables, etc.) and ক্রিয়া (verb)] different from English grammars which provide eight basic parts-of-Speech (like: Noun, Pronoun, Adjective, Verb, Adverb, Preposition, Conjunction and Interjection). However, most linguists want to capture finer grammatical

distinctions, leading to larger tag sets. For easing computational process using our tagset as well as for universality of our tagset, we have used English POS notation.

In the next section, we will briefly discuss the nature of Bengali language and the necessity of fine-grained tagset leading to the discussion in section 3 on previous research on tagsets. Section 4 discusses the design methodology for this tagset followed by a description of the design in section 5. The next section shows the tags for proper noun masculine gender according to our tagset. In section 6, we discuss the availability of the tagset and in section 7, we show an annotated text with our tagset followed by conclusion in the last section.

2. Nature of Bengali Language and the Necessity of Fine-Grained Tagset

At the beginning, Bengali language started with a few number of vocabularies, but with the passage of time, its vocabularies have increased significantly from a variety of languages. Bengali words have come from five broad categories, according to the Bengali grammarians. The categories are: words directly coming from Sanskrit; words coming from Aryan language; words (slightly changed) coming from Sanskrit; words coming from indigenous languages and words coming from foreign languages [3]. Besides these, there are some mixed words in Bengali like (গকেট-মার= English + Bengali), (ডাকার-খালা= English + Persian), etc.

But the maximum number of words in Bengali language had directly come from Sanskrit language. As Sanskrit is a completely inflectional language, a significant dominance of inflectional features is also observed in Bengali. But, there also exists some agglutinative features in Bengali language. Bengali language follows the SOV (Subject + Object + Verb) structure.

Bengali, being a completely inflectional language, requires a lot of linguistic knowledge to extract significant information form any text. Consider the sentence: I go to school. In Bengali, আমিবিদ্যালয়েযাই।Ifsomeone writes আমিবিদ্যালয়যাই।Then, it does not make one's statement completely clear to us. So, the inflectional part ''©' plays an important role in the understanding of the writer's view. The word 'বিদ্যালয়' takes 34 forms and each form signifies the word differently. So, for finding sufficient information from Bengali language, we need a significant number of tags.

3. Previous Research on Tagsets

The early efforts in POS tagsets were UPenn, Brown and C5 mainly for English using flat structure [2]. They were coarse-grained tagsets – Penn Treebank tagset used 45-tags, C5 tagset used 61 tags. The CLAWS2 introduced the hierarchical structure in parts of speech tagging for decomposing tags [2].

Though several tagsets have been developed for Bengali language like Bangla POS Tag Set (91 tags) by Goutam Kumar Saha, CDAC-Kolkata[4], 53 morpho-syntactic tags by BRAC University [5], and Bangla Tagset by ILPOSTS, Microsoft Research Private Limited [6]. Among them, first two are coarse-grained tagsets, strictly following Penn Treebank standard. The last one is hierarchical tagset following CLAWS2 standard.

53 morpho-syntactic tags by Brac University, Bangla POS Tagset (91 tags) by Goutam Kumar Saha, CDAC-Kolkata have compromised with the inflectional feature of this language. These tagsets are completely influenced by Penn TreeBankTagset designed for English.

The hierarchical Tagset produced by Microsoft Research India, Bangalore has considered the inflectional feature of Bengali language, but for its conformity with IL-POSTS frame, it has compromised some of the significant features of Bengali language – repeated words (আমি'জ্বরজ্বর'(বাধকর্ছি), mixed verbs (দর্শনকর্লাম), compound proper noun ('হাসালটাসালকে' দিয়েএকাজহবেলা).

So, we have attempted to design a fine grained Bengali tagset of the Bengali language.

4. The Design Methodology for this Tagset

The design methodology of this tagset is based on the linguistics knowledge of Bengali language. Any Bengali word can be different based on any of the following characteristics like – number, gender, complementary foreign words, repeated words, compound words, agglutinative words, objective case, possessive case, locative case, definiteness, finiteness, emphatic feature, person, tense, mood, negativity, honorificity, insult, persuasion. Although, some of the linguistics features like number, person, tense, case-marker, aspect, mood, finiteness, distributive, definiteness, emphatic, negative, honorificity, numeral, realis are used in Annotation Guidelines for Bangla[6], Microsoft Research Labs Indian Pvt. Ltd., Bangalore, they have skipped the following significant features like gender, complementary foreign words (now used as like as bengali word – (AMSTANATI)), repeated words expressing

another parts of speech (ভারকবিকবিভাবআছে – here the words), agglutinative words (আবালবৃদ্ধবণিভা), persuasion (আমিভাকেশড়াচ্ছি). Below, we are discussing our word classifications for this fine-grained tagset.

4.1 Number

Bengali nouns fall in two number categories. They are singular number and plural number such as - 'হাসান' and 'হাসানেরা'. The same word 'হাসান' is inflected with some inflections to make the word 'হাসানেরা'.

4.2 Gender

Gender plays an important role in information extraction. Consider the sentence: বাঘতারবাছাকেণুখণওয়াছে।This sentence is not semantically correct, as a masculine gender cannot do this task. There are four types of genders in Bengali. They are masculine, feminine, common and neuter. We have classified words based on gender, so that we can easily find gender specific information from the tag.

4.3 Complementary Foreign Words

We have tagged foreign words based on the syntactic roles the word plays in the sentence. For example: সেঅনেক্মেজরসমস্যাসৃষ্টিকরেছে। Here, the word 'মেজর' is a foreign word, but here it is used as a circumstantial adjective. So, we have tagged it as a circumstantial adjective.

4.4 Repeated Words

When a single word is used next to next, its syntactic category may change. For example, 'ভারকবিকবিভাবআরগোলনা'. Here, the words 'কবিকবি' are no longer common noun, they are treated as adjective in our tagset.

4.5 Compound words

Compound words are treated as Common Noun, Pronoun etc., based on the syntax. For example: রহিম-করিমভালছেল। Here, the compound word 'রহিম-করিম' is tagged as compound form of proper noun. On the other hand, মাবাবাসবাইচলেগছে। Here, 'মা-বাবা' is treated as compound form of common noun.

4.6 Agglutinative words

Agglutinative words also take different tags based on syntax.

4.7 Objective Case

Bengali objective cases take different forms unlike English. Consider the two sentences: আমিকরিমকেএকটিবইনেই। I give Karim a book. In English the object does not change its form, but in Bengali, it changes, 'করিম'becomes 'করিমকে' in Bengali objective case.

4.8 Possessive Case

Possessive cases provide significant information about word such as – করিমেরঘড়িকাল। Here, 'ঘড়ি'is the subject of the sentence. 'করিমের' expresses who is the owner of the 'ঘড়ি' I We have signified possessive cases as different tags.

4.9 Locative Case

Locative cases perform like English adverbial in Bengali such as – গাছেপাথিবমেছে। We know 'গাছ'is a common noun in bengali. But the inflection 'c'added with 'গাছ'has given it locative property. We have tagged it differently than as a usual common noun.

4.10 Definiteness

Bengali nouns may end with a definite article like – আমটিমিষ্টি|Here, the base noun is common noun ('আম')and 'টি'is used here to specify the mango.

4.11 Finiteness

Finiteness is used with verbs. Verbs may be of two types – finite and non-finite. Consider the two examples: সেগড়েখলভেযাবেand সেগড়ে। The first 'গড়ে'is a non-finite verb and the second 'গড়ে'is a finite verb. We tag verbs based on the syntax.

4.12 Emphatic Feature

Emphatic features may be expressed by inflection in Bengali such as – Hasan, too, goes to school. In Bengali, it is expressed as 'হাসাৰওস্কুলেযায়' l

4.13 Person

English verbs do not change with person, except third person singular number. But, Bengali verbs change form with the change of person form. For example, I go and you go. আমিযাই and ভূমিযাও। Here, as the verbs have changed its forms, we have treated persons separately in Bengali for their linguistics importance.

4.14 Tense

Bengali verbs are inflectionally sensitive with the change of tense. For instance, the verb 'do' have five unique forms in English – do, does, did, doing, done. But, in Bengali, it can take more than 200 forms based on tenses, person, honorificity, etc. We have to separately tag them for more fine grained information.

4.15 Mood

Mood expresses speakers' attitudes towards the listener. For example, 'দ্যাকরেভেতরেআমূল' lHere, the speaker is requesting someone to come in. We have taken into consideration of different types of moods used while expressing views and tagged them separately.

4.16 Negativity

Negative forms may be used in two ways in Bengali. They may be used with a verb word like 'যায়না'or they may be used as a separate word like 'যায়না' lWhen, they are used with the verb word, we tag them as verb and add 'N' at the end of the verb as negative tag. When it is used separately, we tag it as a Negative indeclinable.

4.17 Honorificity

This information is used in person. To indicate a respected person, we use 'ভিনি' instead of 'ল'in Bengali. We also change in verb forms based on honorificity.

4.18 Insultory

It is treated same as honorificity in Bengali.

4.19 Persuasion

Like imperative, we can add persuasive sense in Bengali verbs to make someone do a work for me. For example: সেবাছটাকেখেলাছে। Here, 'খেলাছে' verb is the persuasive form. It is tagged differently than the verb 'খেল' l

4.20 Some Peculiarities

There are some peculiar forms in Bengali language. For example, two words can act as a single part of speech in Bengali – 'উদ্যাপনকরা'or 'celebrate' in English. In Bengali, they are called mixed verbs. Mixed verbs in Bengali can be formed in three ways like verbal noun + finite verb = mixed verb, verbal adjective + finite verb = mixed verb and indeclinable + finite verb = mixed verb. We treat them separately as verbal noun, verbal adjective and indeclinable and if any finite verb is found following them, we treat these two words together as a mixed verb.

Above mentioned, more than one feature can be present in a single Bengali word, then we have tagged it separately. 'হাসালকেও'is tagged as Proper Noun Objective Emphatic Masculine (NPOEM) according to our tagset.

5. A Description of our Tagset for Proper Noun Masculine Gender

Our tagset is based on morpho-syntactic information of Bengali language. Our full tagset contains 1070 tags. Our full tagset can be found in http://www.sust.edu/cse/nlp/finegrainedtagset. There is a sample of complete tagging of Bengali proper noun (masculine gender) based on our tagset below:

TABLE 1: Tags for Proper Noun Masculine Gender

1 Proper Noun Plural NPM (হসাকা) 2 Proper Noun Plural NPSM (হসাকা) 3 Proper Noun Singular Possessive NPSM (эльтера) 4 Proper Noun Plural Possessive NPSSM (эльтера) 5 Proper Noun Singular Objective NPOM (заратера) 6 Pronoun Noun Plural Possessive Objective NPSSM (заратера) 7 Proper Noun Singular State NPSTM (заратера) 8 Proper Noun Singular Definitive NPDM (заратера) 10 Proper Noun Singular Possessive Definitive NPSDM (заратера) 11 Proper Noun Plural Possessive Definitive Objective NPSDM (заратера) 12 Proper Noun Plural Possessive Definitive Objective NPSDM (заратера) 13 Proper Noun Singular Definitive Objective NPSSDM (заратера) 14 Proper Noun Plural Possessive Definitive Possessive NPSSDM (заратера) 15 Proper Noun Singular Definitive Emphatic NPSDM (заратера) 16 Proper Noun Singular Possessive Definitive Emphatic NPSDEM (заратера) 17 Proper Noun Singular Definitive Objective Emphatic NPSDEM (заратера) <t< th=""><th></th><th>: Tags for Proper Noun Masculine Gender</th><th>1</th></t<>		: Tags for Proper Noun Masculine Gender	1

8. Conclusion

As natural language processing is a new field and a small amount of work is done on Bengali language, we are yet to get a standard tapset for Bengali language. For a lack of standard common tagset, the research in Bengali language is not up to our mark. To provide a common platform for every research group, we have proposed a tagset that has analyzed Bengali language from the morpho-syntactic perspective. As Bengali is a highly inflectional language, we have to consider inflectional feature of every word class of this language. For this reason, we have developed a tagset of 1070 tags. We have presented a fine-grained tagset for Bengali language. Each tag of this tagset bears significant amount of information about a Bengali word and its syntactic structure.

We hope that the Tagset will initiate all the researches for NLP applications for Bengali that was notdone in common criteria for a lack of a standard tagset in Bengali language.
